

CARDS

Character – stays in play as permanents, can attack, defend, and carry abilities.

Location – stay in play as permanents, may be played only once from by the same player, may carry effects.

Item – can be played directly or attached to characters and locations.

Tokens – temporary instances of cards created by effects. They behave like normal cards of their type but do not come from a deck

1. **Name** – the card's title
 2. **Faction** – who the card belongs to
 3. **Acquisition Cost** – cost to play the card
 4. **Support Fee** – additional cost to play a Support Ability
 5. **Card Type** – e.g., Character, Location, Item
 6. **Text Box** – lists abilities or effects
 7. **Item Slots** – the maximum number of items a card can have attached
 8. **Victory Token Field** – allows the card to collect Victory Tokens
 9. **Combat Stats** – lists the attack- and defense values of a character
- A. **Linked Zones** – defines the slots affected by a linked ability

RESOURCES

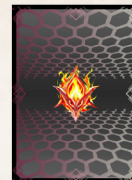

Resources are created by special resource tokens when they are exhausted.

Once per turn, you may trade one Command Token to create one of those tokens.

Resources created from a token go into your personal pool and expire at the end of each phase.

Resources are usually factionless, unless the source specifies a faction.

Characters with a faction symbol must always be paid with at least one resource of that faction

TURN SEQUENCE

Morning Phase – no cards may be played and no abilities may be activated during this phase. Remove one exhaustion counter from each card you control. If an exhausted card has no counters left, turn it face up. Then refill your command tokens up to a maximum of 2.

Day Phase – the active player gains priority and may play cards or activate abilities.

- Exchange one command token to draw 1 card.

- Once per turn, exchange one command token for a resource token.

- Once per turn, exchange one command token for a Victory Token. You may only use this ability if you have fewer Victory Tokens than all other players.

- Play characters and items from your hand, or attach items to cards with an open item slot.

- Once per turn, play a location from your hand. You must discard all other locations you control first.

- Activate abilities or turn face-down cards attached to cards you control face-up.

- Once per turn, you may enter the Combat Phase. After combat you return to the Day Phase. You cannot attack during the very first turn of the game.

At the end of the Day Phase, players may activate abilities one last time before the phase ends.

Evening Phase – End of turn. Effects that last "until end of turn" expire.

Night Phase – Serves as a transition between turns. No player actions are possible. Then the next player's turn begins

Game Board

1. **Main Character Slot** – holds your main character; remains blocked if none is chosen
2. **Character Slots** – five positions for characters or tokens; no more can enter if all are filled
3. **Location Slot** – holds exactly one location; only the most recently placed stays in play
4. **Void** – zone for cards permanently removed from the game

5. **Item Slots** – keeps Attachments linked to permanents; if the host leaves play, the attachments are discarded

6. **Resource Zone** – area for Command Tokens, resources and resource tokens, which are exhausted to generate resources

7. **Deck** – your face-down draw pile; only the top card may be drawn or altered

8. **Discard Pile** – public zone for played or discarded cards; order may matter

COMBAT PHASE

During this phase, any number of attacks may be declared one after another. Only non-exhausted cards with combat stats may attack.

Only cards with combat stats may be attacked or assigned as blockers. Only non-exhausted cards may block.

Before damage is dealt, all players have one last opportunity to respond.

An unblocked attacker deals its damage directly to the chosen target. In blocked attacks, attackers and blockers deal damage simultaneously equal to their stats. If a card has damage counters equal to or greater than its defense, it is discarded.

Afterwards, attackers and blockers become exhausted.

After all attacks have been performed, the game returns to the Day Phase

EFFECTS AND RESPONSES

Whenever an ability is activated or a triggered effect occurs, it is placed "on the stack." Players may respond in turn order by adding further effects. The top effect resolves first, then the one beneath it, until the stack is empty.

Only effects can be answered. Playing a card or activating an ability itself cannot be responded to.

After each action, players check the game state together: does a card have damage equal to its defense? Are cards in illegal zones? Such conditions are handled immediately before play continues.

This creates a clear principle: action – response – resolution, letting players interact without losing track of the game flow

ABILITIES

Are an essential part of the game. Abilities create effects that players may respond to.

Static abilities – continuously apply as long as the card is in play face-up. Permanent stat bonuses, additional keywords, or always-on effects. They require no cost or trigger.

Triggered abilities – automatically activate when their condition is met (e.g., “when this card enters the battlefield”). They trigger as soon as all other effects have been resolved.

Activated abilities – always have a name and may be used intentionally by paying their listed costs, if exist. Activation requires the player to have priority.

Support abilities – may only be activated from hand when no other effects wait to be resolved. Reveal the card, pay the activation cost, then discard it

Objective abilities – define alternative win conditions and help to collect Victory Tokens. If a card with an Objective reaches its printed threshold, its controller wins the game immediately.

Victory Tokens may only be placed on cards with a Victory Token field. It is legal to place more tokens on a card than the printed value shows.

Command abilities – are activated abilities that additionally require a Command Token to be paid.

Link ability – affects cards in the provided direction next to this card.

Equip abilities – are active for as long as the card is attached to another card's item slot

STATES

Face-down – A face-down card is flipped to its back, it lose all characteristics except their card type (Character, Location, Item). Only the controller may look at them.

An exhausted card may be looked at by any player, even your opponent.

Exhaustion ends when all Exhaustion Counters are removed during the Morning Phase or by an effect

If a player would draw a card but their deck is empty, that player immediately loses the game

An immediate win is possible if a card with a Victory Token field and an Objective ability has collected the required number of Victory Tokens.

In addition, once per turn you may use the global ability “Contingency”: Spend one Command Token to place a Victory Token on one of your permanents.

Cards with a Victory Token field increase the total number of Victory Tokens in the shared pool when they enter the board.

Victory Tokens are gained from your cards' effects or from Objective abilities.

Collect the majority of all Victory Tokens to win.

GAME GOAL & VICTORY CONDITIONS

GAME SETUP

Each player chooses a deck and picks their Main-Character from it. The Deck is shuffled and placed face-down in the Deck Zone. After all players completed their setup, the Main Character is revealed and placed in the Main Character Zone face-down.

Then all players draw 6 cards as their starting hand.

The amount of Victory Tokens available in the shared pool is determined from all Main-Character's Victory Token Fields. In addition, players set aside counters or dice to track their own Resources and Command Tokens.

The starting player is determined by Initiative: the Main-Character with the lowest acquisition cost begins the game. If there is a tie, use a random method to decide instead

MAIN CHARACTER

The main character defines your faction and initiative. Any card with a Victory Token field and the slot remains empty.

All main characters start the game face-down and exhausted but without an Exhaustion Counter on them.

They are permanents that cannot leave their zone, be removed, or change control.

If damage equals or exceeds defense, they become exhausted and all damage is cleared. Attachments, counters, and statuses remain

1. Victory Token Field

TURN SEQUENCE – OVERVIEW

Each turn consists of four fixed phases and a phase between turns:

Morning Phase – Refresh your cards and Command Tokens.

Day Phase – Perform actions: Play cards and activate abilities.

Combat Phase – Your characters attack, your opponent defends.

Evening Phase – End your turn and cleanup.

Night Phase – Effects that happen between turns.

After the Night Phase, the next player begins their turn
